

Consulting. Technology. Innovation.

(Senior) Software Developer (m/f)

About us

A great team, clear strategy, the right technology, and speed—this is the DNA of business. M2P is a global management consulting firm that transforms businesses by accelerating growth through an integrated offering of professional services, technology services and innovative ventures. The business unit DTS (Data & Technology Services) aims to increase the operational efficiency of its customers by industry-specific, cloud-based IT tools and services. We are a group of smart, friendly people who collaborate closely and take pride in delivering amazing software and providing extraordinary customer experience. You'll help shape what we work on and how we do it. You won't be micro-managed or stuck in a rut. We work hard on challenging problems and have a good time doing it. For our office in Frankfurt, we are looking for motivated, talented individuals who love to code and want to join our close-knit engineering team.

Our Technology Stack

We use the best tools for the job and you'll have full input into what our stack evolves into. Some of the technologies currently in use:

- Python (Pandas, NumPy, Dask, Jupyter, asyncio, crossbar.io, Flask and more)
- C++, Qt
- JavaScript, Ember.js, Redux, Bootstrap
- PostgreSQL, MongoDB
- Git, Gitlab
- Google Compute Engine, Microsoft Azure, Docker, Kubernetes, Ansible
- Gurobi, GLPK

About you

- You are fluent in Python and ready to use a broad range of the Python ecosystem
- At the same time, you are pragmatic and open-minded about other technologies
- You successfully completed your studies (University / Technical Institute) in a technical field, ideally with a software engineering focus
- You have a passion for writing top-notch software that is both beautiful and fun to use by customers
- You have a strong opinion about clean code while still appreciating pragmatism
- You have done a coding project that you are proud of and that you are happy to show and tell us about
- You prefer to work on Linux, Unix or a Mac

What will I be working on

You'll be able to work across the whole stack - from backend and challenging data analytics to frontend and design for our tailor-made applications.

- Data Analytics. Working on challenging data analytics projects to support our consultants in the field.
- Architecture. Designing and setting up a flexible and robust system architecture is the base for our overall service oriented implementations.
- Requirements. Pumping our customers and consultants for information and intelligently transform their requirements into blazing application components.
- Infrastructure. Enabling our applications to be fully cloud enabled and support the process of continuously deploying software releases.
- UI. User Interface is not all, but without UI all is nothing.

Do you want to become part of a dynamic and innovative Team?

We look forward to receiving your application via E-Mail:
